

About the Company:

Ryerson Innovative Enterprises LLC “aka” RIE LLC

“Ryerson Innovative Enterprises” was founded in 2016 by Douglas Ryerson to offer products that safely sanitize indoor living areas using FDA approved antimicrobial systems and products.

These systems and products “Increase Healthier and Safer Indoor Environments”.

WelEssence Spray and WelEssence surface coatings are FDA approved products with natural food grade ingredients that have highly active safe antimicrobial actions.

Corona Viruses “Covid 19”, Flu H1N1, Bacteria and Fungi “Molds” and Odors are continuously eradicated in the air and on surfaces for minimum of 3 months after application using “Slow release Technology”. Efficacy is up to 99.9% proven by certified lab testing with most of these documents available on this riehydroxyls.com website.

Hydroxyls Systems create –OH hydroxyls from air water vapor pulled through the UV light sources inside the systems. Many systems are available for indoor use from small to very large indoor areas.

This process mimics the sun during the day creating Hydroxyls in the outside air.

Hydroxyls during the day are called “Detergents of our Atmosphere” breaking down chemicals and killing microbes in the air and on surfaces and fighting Odors. Without Hydroxyls processes daily we would be in trouble.

RIE LLC will continue to develop and offer new products derived from natural processes and natural food plant based ingredients which is the premise of the company moving forward.

Why wouldn’t you want to “Increase the Health and Safety of your Indoor Environments?”

Doug Ryerson Graduated from UC Berkeley in 1977 with a degree in Human Physiology later followed up with Material Sciences.

In the past he worked in big Pharma and High Tech Electronics companies for many years.
